**High performance
Automatic Air Vent and
Isolating valve for Solar Systems**

July 2010

high performance automatic air vent for solar systems

This particular series of automatic air vents has been specifically designed to work at high temperatures with a Glycol medium, which is typical of solar heating systems.

The components are engineered for an extremely wide range of temperatures, from -30°C through to 150°C. The valve has been tested through to peaks of 180°C

Product data

Max temp short peaks	180°C
Max working temp	150°C
Max Pressure	10 bar
Min press	1 bar

Solar Ball Valve

The solar ball valve is designed specifically to be used in conjunction with the automatic air vent. It acts as an isolation device and usually, it is installed at the highest point in the system, near or next to the collector.

When required, the valve can be closed and the automatic air vent removed, without draining down.

max. working temperature:	200°C
min. working temperature:	-30°C
max. working pressure:	15 bar
min. working pressure:	0 bar
